### Explanation:

The subject matters of claims 1-15 are not described in documents 1-4 cited in the ISR, and so appear to be novel.

Document 1 describes (1) compounds represented by a formula that encompasses those described in claim 1 of the present application, (2) a feature wherein the said compounds are used as a radiation-sensitive-acid generating agent, and (3) a positive-type radiation-sensitive resin composition containing the said acid generating agent, and a person skilled in the art could have easily made the subject matter of claim 1 by selecting substituents, etc. Document 2 describes that compounds different only in the substitution position of a naphthalene ring from those described in claim 1 of the present application are effective as a radiation-sensitive-acid generating agent, and a person skilled in the art could have easily changed the said substitution position and made compounds having the same effect. In addition, it is not considered that the subject matters of claims 1-15 of the present application produce a particular effect.

The subject matters of claims 1-15 do not appear to involve an inventive step.
